

Tektelic is a Canadian provider of best-in-class IoT gateways sensors and globally deployed applications.

Challenge

The client produces wireless IoT devices for different outdoor and indoor solutions based on the LoRaWAN™ technology.

The client was looking for maintenance and updates to the existing network server administration system. The system was created by another team unable to support it in a timely manner.

The challenge came up to review the existing source code and provide all the required updates and support to the system.

Solution

The cooperation is ongoing. Our company provides technical support and maintenance to the network server administration system.

The timeliness of updates and quality of maintenance have improved significantly.

Tools and technologies

- Java
- MQTT
- LoRaWAN
- HTML/CSS/JavaScript
- AngularJS

Scope of work

- Requirements elaboration
- Front-end development
- Back-end development
- Quality assurance

Results

- We took over the project in only 2 weeks.
- We continue to work on the project by providing maintenance and updates to the system, in addition to quality assurance.
